

Why can't I find a specific vendor or product?

Last Modified on 04/02/2026 8:44 am EST

We maintain a very large database, and we're still expanding!

There are a few reasons we might be missing a product you're looking for

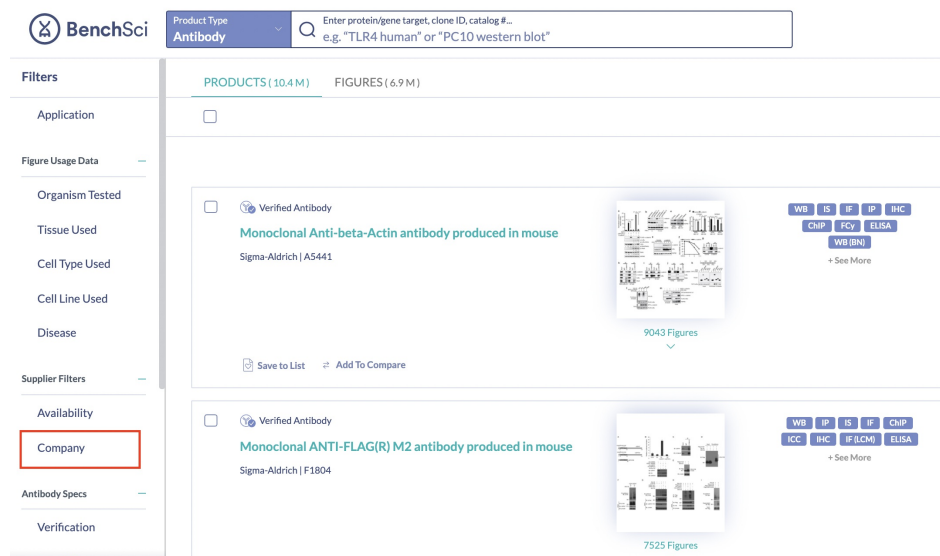

- We don't yet have that vendor's catalog in our database
- It's a new product from a vendor we already have a relationship with

In either case, [let us know](#) and we'll reach out to them for their latest catalogs so we can [update our database](#).

Checking if we have a specific vendor

1. Navigate to the products results tab
2. Open the **Company** filter under *Supplier filters*
3. Search the list for your vendor of choice

When you select the vendor, we'll show you all of their products on the platform.

Searching for a specific product

If you are [searching for a specific product](#), simply type the catalog number of the product into the search bar. Clicking the search suggestion will navigate you directly to the product page.
